Expt-3

# Map Reduce program to process a weather dataset.

### AIM:

To implement MapReduce program to process a weather dataset.

### **PROCEDURE:**

1. Create Weather Dataset:

```
nano weather_data.txt

Example content:
20220101 30.5
20220102 29.8
```

2. Mapper Program (mapper.py):

```
#!/usr/bin/env python3
import sys
for line in sys.stdin:
  line = line.strip()
  month = line[4:6] # Extracting month
  temp = line[7:11] # Extracting temperature
  print(f'{month}\t{temp}')
```

3. Reducer Program (reducer.py):

```
#!/usr/bin/env python3
import sys

current_month = None
current_max_temp = -float('inf')

for line in sys.stdin:
    line = line.strip()
    month, temp = line.split('\t')

try:
```

```
temp = float(temp)
             except ValueError:
                continue
             if current month == month:
                current max temp = max(current max temp, temp)
             else:
                if current month:
                  print(f'{current month}\t{current max temp}')
                current month = month
                current_max_temp = temp
           if current_month == month:
             print(f'{current_month}\t{current_max_temp}')
4. Run the Program:
           hdfs dfs -mkdir /weatherdata
           hdfs dfs -copyFromLocal weather_data.txt /weatherdata
           hadoop jar $HADOOP HOME/share/hadoop/tools/lib/hadoop-streaming-*.jar \
           -input /weatherdata/weather data.txt \
           -output /weatherdata/output \
           -mapper mapper.py \
           -reducer reducer.py
5. Check Output:
```

hdfs dfs -cat /weatherdata/output/part-00000

#### **OUTPUT:**

```
rakesh@Ubuntu:~$ hdfs dfs -cat /weatherdata/output/part-00000
2024-09-25 13:40:02,128 WARN util.NativeCodeLoader: Unable to load native-hadoop
library for your platform... using builtin-java classes where applicable
01 -2.9
02 9.3
03 10.4
04 15.7
05 20.1
06 28.3
07 28.2
08 28.4
rakesh@Ubuntu:~$
```

## **RESULT:**

Thus, the program for weather dataset using Map Reduce has been executed successfully.
